(3) *Health and Sickness*

291 The fellah's clothes are no more of a barrier against the elements than his work. They cut him off from neither air nor sun, earth nor water. This absorption into his environment gives him abundance of physical life. His robust 142 and hardy constitution is in harmony with nature. For 513 sleep he needs no mattress, no comfort. He bears the most 151 brutal incisions without a cry. Colds, headaches and the foulest odours trouble him not at all. His appetite never fails, and his extremely sensitive hearing catches the slightest sound, human or other.

164 Very often, unfortunately, Nature turns treacherously upon him and infects his unsuspecting body with diseases which fatten and undermine him. These are endemic diseases which are rooted in the peasant class. Let us say nothing of tuberculosis or hereditary syphilis, which are the fellah's constant companions. Far more dangerous are bilharzia, ankylostomiasis (hookworm) and malaria, which in some *mudiriyas* affect more than 80% of the population. [515] These arise from lack of cleanliness, and too close a contact between man and the soil.

But the most noticeable are the eye-diseases. Though the greenness of the fields is restful to the sight, the heat and glare of the sun and still more the thick dust which no rain ever lays, the sandy wind from the hardby desert, the dung, the flies, and dirty fingers all combine from childhood to inflame and infect the eyes, if not to blind them. It is impossible to pass through a village without being struck by the number of blind and one-eyed people going about. According to statistics they amount to 60% of the population. In 1927 it was officially recorded that there were 266,550 one-eyed people and 110,000 completely blind. In 1937 the provinces of Minia and Assiut were credited with 50,000 either one-eyed or blind. In actual fact there are more than that. There is no counting the bleary or bloodshot looks, the eyes dimmed by glaucoma or trachoma.

Another scourge is *bilharzia* (**). This is a form of haematuria caused by a parasite which is absorbed into the system through the skin. The fellaheen make their ritual ablutions [515 daily, often side by side, in any sort of water, and work bare-744] foot on the damp earth or in the mud of the drains. The larva of this parasite, which is peculiar to Egypt, grows
